

OPTRA Recognized by General Dynamics ATP Detection Systems for Outstanding Supplier Performance for 2010

Topsfield, MA (March 8, 2011) - OPTRA has been recognized by the General Dynamics ATP Detection Systems Business Unit for outstanding performance for 2010 in both Quality and On Time Delivery. OPTRA supplies Fourier transform spectrometer modulator to GDATP for incorporation into the JSLSCAD system (Joint Services Lightweight Standoff Chemical Agent Detector). "OPTRA's long involvement with the JSLSCAD program as part of the GDATP team is strengthened by the close cooperation of our two organizations in our common effort to deliver high quality components" said Jim Engel, OPTRA President. "This recognition by GDATP of the efforts of the OPTRA organization is appreciated."

OPTRA, Inc is a provider of radiometric and spectroscopic instrumentation for industrial, environmental, and chemical warfare agent monitoring applications. OPTRA is a supplier of ultra precision measurement solutions using state-of-the-art electro-optical technology. We market the NanoGrid[®], NanoScale[®], and NanoGage[®] nanometer resolution grid and linear encoder products, as well as Laser Detection and Optical Beam Steering systems. OPTRA has a history of winning leading-edge technical development contracts for both commercial and government related research. OPTRA manufactures products and also licenses certain technologies that have originated from its development work.
